For Immediate Release

Announcing Keep Positive from Code Writing Robot!

Code Writing Robot proudly introduces Keep Positive, a new application for the iPhone and iPod Touch. Keep Positive is an innovative new way to manage your money. By keeping track of what's to come instead of what's already cleared, Keep Positive shows you a chronologically sorted view of upcoming bills, and the total expenses before your next pay day. Instead of checking your account balance on the web or at an ATM and guessing how much you can safely spend, a quick glance at Keep Positive gives you the straight answer. At only 99 cents, if Keep Positive saves you from just one bank overdraft fee it will have paid for itself dozens of times over.

Keep Positive is easy to set up and effortless to maintain. Using your online banking statement as a guide, you can enter in your bills in just a few minutes with name, amount, and recurrence. Keep Positive will instantly give you your total pending bills and a monthly summary. Unlike some apps that quickly lose their novelty, Keep Positive becomes a steady companion, helping you make more informed financial decisions when you're buying groceries, withdrawing from an ATM, or shopping at the Apple Store.

[Visit Keep Positive at the iTunes App Store Now](#)

Code Writing Robot was founded in 2008 by two regular guys with a simple dream: a robot that could write code for them. The company develops applications for the Apple(TM) iPhone and iPod Touch.
